JD launches TranzX PST website

Friedrichshafen, Germany. September 1, 2007 – JD, the manufacturer of mobility products and bike components, announced the launch of a new website for TranzX Power Support Technology, its state-of-the-art pedal-activated drive system for electric bicycles. The website release coincides with the 2007 Eurobike and IFMA trade fairs in Germany.

The new TranzX PST website (www.tranzxpst.com) offers visitors a comprehensive look at the new technology and its uses through general and technical info, product specifications, photos and information manual downloads in multiple languages.

The website is especially geared toward the bicycle industry and trade professionals, targeting current and potential clients, manufacturers and OEMs. A media section offers current and archived press releases about TranzX PST, background information, details of upcoming events and trade shows, as well as a collection of press photos available in high-resolution for media use.

The new website is an effort to make the industry more aware of TranzX PST and to accommodate JDs expanding client base. In the future, the website will also offer clients password-protected access to a wealth of technical and marketing resources.

About JD

JD ignited the 20th century's last great fad when it created the Razor and JD Bug kick scooters. JD develops and manufactures innovative and environmentally responsible mobility products and technologies to continually advance how people move and live.

The company began in 1986 in Chang Hua, Taiwan as a manufacturer of high-end aluminum bicycle frames and specialty components, which it continues to produce and market globally under TranzX, a global brand for quality bicycle components.

Today, JD is a world leader in mobility innovation, with an outstanding collection of quality brands across different product categories. These brands include: JD Bug, CityBug, JD Razor and TranzX. All of the products produced by JD Corporation have the quality and reputation for high standards that JD has established over more than two decades.

About TranzX PST

JD officially launched TranzX Power Support Technology (PST) as a next-generation drive system at the Taipei Cycle Show in March 2007. TranzX PST propels bicycles with the latest in efficient and lightweight electric technology, delivering a smooth and unique riding experience. Virtually maintenance-free, the high-tech system offers smoother acceleration, low running costs, simple operation, low noise and zero emissions.
